

HeelZup[®] Cloud

Contoured Heel Suspension Cushion

One of the leading challenges for the wound care community is the prevention and treatment of heel pressure injuries. The heels are naturally susceptible to pressure injuries and even the most advanced support surfaces often prove to be an ineffective means of prevention and treatment. Existing modalities of heel pressure injury prevention and treatment have certain drawbacks. Heel boot style products require frequent removal to inspect the skin integrity of the heel, ankle and foot. Pillows, which slide out of place and compress easily are also a high maintenance and unreliable way to elevate the legs and offload pressure from the heels. The HeelZup[®] Cloud Heel Suspension Cushion provides a practical and cost effective solution this complex problem:

- High resiliency foam provides excellent pressure redistribution, while the top layer of open celled Visco Elastic foam cradles the legs in plush comfort.
- Consistently and reliably elevates the heels a minimum of one inch off of the mattress surface.
- The bottom layer of the HeelZup[®] Cloud Cushion is formed with our unique **ImmersaFlex[™]** Contouring System. **ImmersaFlex[™]** is an array of support columns and voids of space that independently adapt to the shape and weight distribution of the leg, resulting in a more customized interface.
- Elevates and legs and suspends the heels in both the supine and 30-degree side lying positions for people of all sizes.
- Top cover materials repel moisture and reduce friction and shear, while the No-Slip bottom material helps the cushion to stay neatly in place. No need for constant maintenance and adjustment.
- Covers are embossed with illustrated instructions and contact information on both side panels. Staff members are always reminded how to properly use and clean the HeelZup[®] Cloud Cushion.
- Manufactured of anti-microbial, hypo-allergenic and latex-free materials.
- Available in both single patient use and reusable models.
- Cooler on the ankle, foot and heel than heel boot type products.
